

## International consulting firm chooses Supernova STS Screen

PwC, formerly PricewaterhouseCoopers, chose dnp Supernova Screen technology for the conference room and auditorium of their new regional headquarters in Jutland, Denmark. The installation is one of the first to use the new dnp STS Screen, which is optimized for Ultra-Short Throw projectors.

### Equipping the new HQ

PwC is one of the world's largest accounting/consultancy companies, with 155,000 employees in 150 countries. For their new regional headquarters in Jutland, Denmark, PwC needed an AV solution that would combine maximal image quality with a minimal footprint in their new meeting and conference room.

### Harmonizing with the interior design

Architect Paul Leroy was responsible for the office's interior design and visual expression. FMJ's AV specialists in dnp Supernova Screen technology had to find a solution that did not interfere with the lamps in his lighting design for the main meeting room. Peter Møller-Johansen, AV Consultant, explains: "A ceiling-mounted projector was not an option. Instead, we decided to use the new dnp STS Screen, which is optimized for ultra-short throw projectors. This allowed us to mount the projector on the wall above the screen."

### More quality; less space

Both the customer and the leading architect are very happy with the result. The dnp Supernova STS Screen enables a powerful and ultra-compact installation that is ideal for use wherever space is limited. The screen is a cost-effective alternative to flat panels in the 80-100" range, offering similar contrast levels at a lower price point.

"If you are looking for a 92" screen in 16:10, there really are no alternatives to a dnp Supernova Screen – a plasma screen in this size is far too expensive. dnp's new STS model is a very compact and competitive wall-mounted solution," says Peter Møller-Johansen.

To complete the AV solution at PwC's new headquarters FMJ installed a second Supernova Screen – a 110" dnp Supernova One – in the auditorium.

### Facts

- > Customer: PwC Denmark
- > Installer: FMJ AV Indretning & Teknik as
- > Screen 1: Supernova STS 92" 16:10 + Epson 485Wi WXGA, 3100 ANSI lumen projector
- > Screen 2: Supernova One 110" 16:10 + NEC PA550 WXGA, 5500 ANSI lumen projector
